

Filtering: Backtracking with Forward Checking

Example:

	WA	NT	Q	NSW	V	SA	T
INITIAL	RGB	RGB	RGB	RGB	RGB	RGB	RGB
NT=R	GB	R	GB	RGB	RGB	GB	RGB
NSW=G	GB	R	B	G	RB	B	RGB
WA=B	B	R	B	G	RB		RGB

Filtering: Backtracking with Arc Consistency/ Constraint Propagation

Example:

WA=R

Variable and remaining values	Constraints	Constraints
WA = {R} NT= { R , G, B} Q= {R, G, B} NSW= {R, G, B} V = {R, G, B} SA= { R , G, B} T= {R, G, B}	SA ≠ WA SA ≠ NT SA ≠ Q SA ≠ NSW SA ≠ V WA ≠ NT NT ≠ Q Q ≠ NSW NSW ≠ V	WA ≠ SA NT ≠ SA Q ≠ SA NSW ≠ SA V ≠ SA NT ≠ WA Q ≠ NT NSW ≠ Q V ≠ NSW

Values are removed for $SA \neq WA$ and $NT \neq WA$

$$Q=G$$

Variable and remaining values	Constraints	Constraints
WA = {R}	SA ≠ WA	WA ≠ SA
NT = { G , B}	SA ≠ NT	NT ≠ SA
Q = {G}	SA ≠ Q	Q ≠ SA
NSW = {R, G , B}	SA ≠ NSW	NSW ≠ SA
V = {R, G, B}	SA ≠ V	V ≠ SA
SA = { G , B }	WA ≠ NT	NT ≠ WA
T = {R, G, B}	NT ≠ Q	Q ≠ NT
	Q ≠ NSW	NSW ≠ Q
	NSW ≠ V	V ≠ NSW

Values are removed for $SA \neq Q$, $NT \neq Q$, $NSW \neq Q$ and $SA \neq NT$

Example (Arc Consistency):

Identify the values of A, B, C so that the following problem becomes **arc consistent**: $A = \{1,2,3\}$, $B = \{1,2,3\}$, $C = \{1,2,3\}$ and Constraints: $A > B$, $B = C$

V: {A, B, C}

D: $A = \{1,2,3\}$, $B = \{1,2,3\}$, $C = \{1,2,3\}$

C: $A > B$, $B = C$

Solution:

Domain	Constraints
A = { 1 , 2, 3}	A > B
B = {1, 2, 3}	B = C
C = {1, 2, 3}	B < A
	C = B

Domain	Constraints
A = {2, 3}	A > B
B = {1, 2, 3}	B = C
C = {1, 2, 3}	B < A
	C = B

Domain	Constraints
A= {2,3}	A>B
B= {1,2, 3 }	B=C
C= {1,2,3}	B<A
	C=B

Domain	Constraints
A= {2,3}	A>B
B= {1,2}	B=C
C= {1,2, 3 }	B<A
	C=B

Now $A = \{2,3\}$, $B = \{1,2\}$, $C = \{1,2\}$ are arc consistent.

R1	R2	
	R3	R4
		R5

$R1 \neq R2$, $R1 \neq R3$

$R2 \neq R3$, $R2 \neq R4$

$R3 \neq R4$, $R3 \neq R5$

$R4 \neq R5$
